User Requirements Specification

Skills Integration Lab 2 – Technical

Planning

		FIRST TERM	
Week nr	Week of	PERSONAL and SOFT SKILLS DEVELOPMENT Personal block on Wednesday 10:15 - 11:45 (exception SVW)	PROJECT WORK Technical block - depends on class group - see TimeEdit
week 1	21/sep	• Introduction course	No class
week 2	28/sep	• Guest lecture VanRoey and Axxes	• Project start • Prepare your first workshop with your client
week 3	5/okt	• First workshop with client	• UPLOAD DELIVERABLE: Business Case • User Requirements Specification • Prepare presentation business case and URS
week 4	12/okt	• Professional portfolio	• UPLOAD DELIVERABLE: User Requirements Specification • Document review by technical coach: receive feedback on your use cases (see team planning on Canvas)
week 5	19/okt	Time to work on portfolio (no personal class) • UPLOAD DELIVERABLE	• Update URS with feedback (work online)
week 6	26/okt	• Presentation business case and URS to your client	Time to work on project (no technical class) • SUBMIT: intermediate buddycheck
		AUTUMN BREAK	
week 7	9/nov	• Feedback in group	• Project week sprint 0 analysis (Thursday and Friday)
week 8	16/nov	• Ethics in IT	• Project week sprint 0 analysis (Monday - other SKIL2 technical classes are cancelled)
week 9	23/nov	• Demo prototypes to your client	• Prepare final delivery analysis and design for your client • Prepare final analysis and design report for future development teams + technical coaches
week 10	30/nov	Time to work on ethics assignment (no personal class) • UPLOAD DELIVERABLE: individual preparation ethical committee	Time to work on project (no technical class)
week 11	7/dec	• Ethical commission • UPLOAD DELIVERABLE: reflection ethical committee	Time to work on project (no technical class)
week 12	14/dec	• Final delivery analysis and design to your client	Time to work on project (no technical class) • UPLOAD DELIVERABLE: analysis and design report • SUBMIT: final buddycheck

User Requirements Specification (URS)

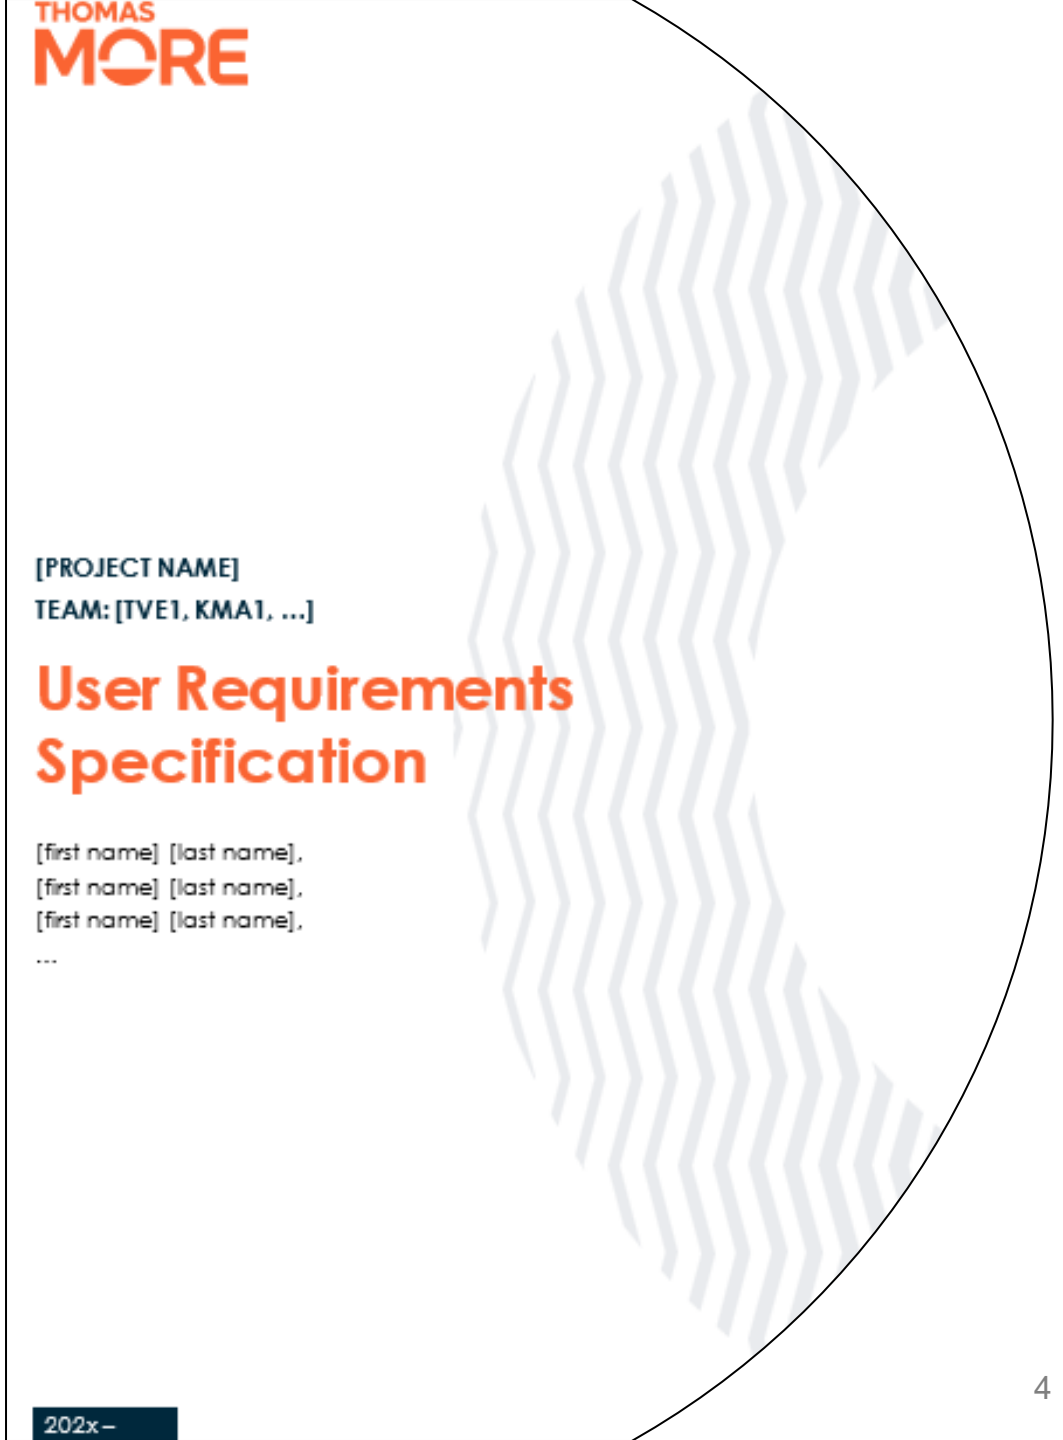

All **functional** requirements that have been discussed/agreed upon during your first workshop with your client

User Requirements Specification	Recipient?	Why?
• Document	Technical coach	Check techniques around use case modelling (see evaluation criteria in the next slides)
• Presentation *(of URS together with business case)*	Client	Check if assignment and requirements were well understood

URS document

Template: NL – EN

Evaluation criteria “use case diagram”

- Correct usage of symbols
- Clear
  - Avoid "Spider’s web"
- Naming convention
  - A verb (infinitive) is required!
- Order of use cases in use case diagram
  - **Chronologically**: at the top, the UCs that logically happen first and below the UCs that are used later in the process
  - Example: UC "request xxx" before UC "approve xxx request“
- Correct sea level (not cloud/kite/fish level)
- Establish extend/include relationships between use cases at sea level (only!) where necessary

Evaluation criteria “use case descriptions”

- Each use case diagram is accompanied by a use case description
  - Pay attention to description of “extend” and “include” relationships
- Describe the use cases in order of occurrence in the use case diagram
- Technical error checks are not included

Evaluation criteria “use case descriptions”

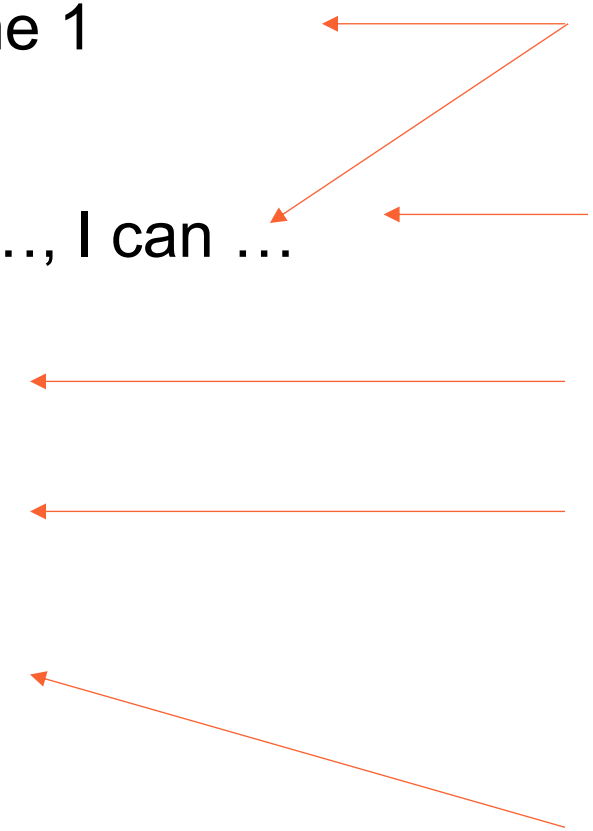

2.2.1 Use case name 1

Functionality: As a …, I can …

[Precondition:]

Normal flow:

[Alternatives:]

Identical name of use case in use case diagram

- ☑ **Functionality: As a <actor> I can <name use case>**
- ☑ **If there is a condition, include it, otherwise omit the title**
- ☑ **Succes scenario / Happy flow**
- ☑ **Chess game / Interaction Actor - System**
- ☑ **Mostly the system starts**
- ☑ **The user has already choosen to start the use case**
- ☑ **Only LOGICAL alternatives for the normal flow**
  If there are none, do not include

Evaluation criteria “report in general”

1. Use the **template**
   - Start with the official template “User Requirements Specifications.docx” (available in English or Dutch on Canvas).

2. **Customize** the cover page
   - Add your team number, student names, and project title.

3. Ensure proper page **layout**
   - The title should be placed at the top of the page.
   - Avoid placing the title at the bottom with the content starting on the next page.

4. Maintain **readability**
   - All text, especially in the Use Case (UC) diagram, must be clearly legible.
   - Use appropriate font sizes and layout to ensure clarity.

Evaluation criteria “report in general”

5. Check for **language** accuracy
   - Avoid spelling and grammar mistakes.
   - In Dutch, pay special attention to DT errors:
     - Correct: *“De actor bevestigt”*, *“heeft bevestigd”*
     - Incorrect: *“heeft bevestigX”*, *“heeft registreerX”*

6. Update the **table of contents**
   - After finalizing the document, **regenerate the table of contents** to reflect all changes.

7. Submit in the **correct format**
   - Upload the document as a Word file (.docx) — do not submit a PDF.

User Requirements Specifications

Tips & Tricks

✅ Client-Friendly Language
Use clear, simple language that's easy for the client to follow.

🔗 Connect to the Organization
Relate to the client's processes or organization.

📐 Logical Flow
Present UC's in a well-structured, step-by-step manner.

🚫 Avoid Technical Jargon
Keep it non-technical — no complex IT terms.

📊 Use Case Diagram Assumed Known
You may assume the client understands a UC diagram.

✏️ Simplify Use Case Descriptions
Keep UC descriptions short, clear, and focused.

To do

- Create / finalize the use case diagram **in group**
  - Have it checked by your coach before the end of this class

- Divide the work
  - Who writes which use case descriptions?
  - Who checks which use case descriptions?
    - **IMPORTANT: plan pair reviews!** Dividing the work is necessary but at the end you need to deliver a consistent analysis
  - Who does the final check of the entire document?
    - Consistency
    - Spell check
    - Layout
  - Who uploads the document on Canvas?
